

Music MVP

music-mvp.com (available website)

By : Nathaniel Scott, Ferdinand Aguwa, Mario Hernandez, and Miguel Maldonado

Music MVP

- **A website when you're on a road trip, and want to hear the tops songs for a particular genre**
- **When on the website, click on a genre and our website will give you a list of the top songs in that genre**
- **Love a handful of songs? Add them to a personal playlist**
- **Sing along! When selecting a song, you will be given the lyrics**

Music MVP

APIs used:

- <http://www.last.fm/api>
- <https://api.lyrics.ovh>

Languages used on our webpage:

- HTML
- CSS
- JavaScript
- Materialize
- JQuery

Music MVP

Known Bugs:

- Special characters break the Lyrics API call. I accounted for the "&" but that was it.
- Lyrics API can get overloaded pretty easily

Improvements:

- Be able to play the song with the Play Button
- Search for individual songs (potentially new page or added feature in the songs-list page)

better Lyrics API potentially?

- Button to push the playlist to last.fm or iTunes(if we used that API) accounts
- Ability to dynamically set the genres (Potentially the top genres from Last.Fm)
- Click on the Full Card would cause the transition to the next page

Things we liked about the site:

- Simplicity, KISS = Keep It Simple Silly

I like putting the play list together
